

Syphon (SY)

Pressure gauge syphons are intended to protect the pressure gauge from the effect of hot pressures media such as steam and also to reduce rapid pressure surges.

Condensate of the pressure medium that is collected inside the coiled or U-shaped portion of the syphon prevents direct contact. When first installed, the syphon should be filled with water or any other suitable separating liquid.

Special Features

Variety of process connection

Variety of sizes to suit the application

Different type of selections to suit technical requirements

Industrial Applications

Petroleum industries

Thermal / nuclear / hydro power stations

Iron and steel industries

Steam boilers, steam traps etc.

Chemical process industries
